

REACH Capabilities

We are prepared to assist companies and consortia in complying with all aspects of the REACH regulation. Specifically, we can:

About Experien Health Sciences

Experien Health Sciences is a multinational consultancy that specializes in regulatory toxicology, occupational health and product stewardship for clients throughout the United States, Canada and Europe. We have technically qualified and experienced personnel on both sides of the Atlantic.

- Determine applicable requirements and exemptions for each substance in a company's portfolio.
- Help you complete your pre-registrations.
- Serve as your "Only Representative" if you don't have a legal presence within the European community.
- Help you identify and join consortia applicable to your products and represent your interests within these groups.
- Perform chemical safety assessments covering all physiochemical, human health, environmental, and PBT/vPvB hazards.
- Gather information from downstream users to prevent sharing confidential business information.
- Develop exposure scenarios and estimates that can be used for multiple substances in a company's or consortia's portfolio.
- Perform risk characterizations for each of a company's or consortia's substances and identified exposure scenarios using accepted methods and models.
- Prepare technical documents, including dossiers, safety data sheets, robust summaries, chemical safety reports, test plans, and applications for authorisation for companies and consortia.
- Utilize substance grouping, read-across, QSAR, modelling, and exposure-dependent waiving, where possible, to reduce substance testing obligations.
- Represent companies and consortia in responding to agency requests and negotiations.
- Manage laboratory testing and other projects to close gaps in hazard and exposure data.
- Develop strategies for mitigating excess risk, including the development of new exposure limits, new air sampling methods, and new data to demonstrate glove and respirator performance.
- Conduct literature searches and enter data into IUCLID 5 using reliable but cost-effective resources.

Experien Health Sciences

Our Experience

We employ experienced staff most of whom have 20 years or more knowledge gained while working on international chemical control initiatives (EU, US, OECD) for industrial clients. Our staff includes PhD- and Masters-level toxicologists, chemists, and certified industrial hygienists. We have successfully pre-registered several hundred chemical substances as the Only Representative for more than 100 small and medium-sized chemical manufacturers / formulators, and we've served as the primary technical resource for the "on time" and "under budget" completion of various Lead Registrant dossiers on behalf of some of the largest chemical companies in the world.
